

CLAIMS

- 1.- A movable table for serving out food, comprising at least two modules, the table having an operating position for serving out food, and a transportation position for transporting the table, the at least two modules comprising an automated transferring device for transferring food receptacles from one end of the table to an opposite end thereof, the upper side of the transferring device in operating position forming a working surface of the table, each of the at least two modules being provided with a transferring mechanism for transferring food receptacles on the automated transferring device of that module when the table is in the operating position, wherein the transferring mechanism of a module is operatively connectable to the transferring mechanism of a neighbouring module as the table is brought into the operating position and operatively disengaged when the table is brought into the transportation position.
- 2.- A movable table according to claim 1, the table furthermore being provided with means for fixing a support above the table surface.
- 3.- A movable table according to any of the previous claims, wherein the table furthermore comprises a device for bringing the transferring mechanism of a module into operating condition with the transferring mechanism of a neighbouring module.
- 4.- A movable table according to claim 3, wherein the device for bringing the transferring mechanism of a module into operating condition with the transferring mechanism of a neighbouring module is an automatic coupling device.
- 5.- A movable table according to claim 3, wherein the device for bringing the transferring mechanism of a module into operating condition with the transferring mechanism of a neighbouring module is a manually operated coupling device.
- 6.- A movable table according to any of the previous claims, wherein the table comprises a single motor unit for all modules.
- 7.- A movable table according to any of claims 2 to 6, wherein the means for fixing a support is made integral with the table.

- 8.- A movable table according to any of claims 2 to 7, wherein the means for fixing a support is telescopic with respect to the working surface of the table.
- 9.- A movable table according to any of the previous claims, wherein the modules are foldable with respect to each other.
- 10.- A movable table according to any of the previous claims, wherein a module can be disconnected.
- 11.- A movable table according to any of the previous claims, furthermore comprising a set of collapsible legs for positioning the table.
- 10 12.- A movable table according to any of the previous claims, furthermore comprising cleaning means for cleaning the working surface of the table.
- 13.- A movable table according to any of the previous claims, furthermore comprising disinfecting means for disinfecting the working surface.
- 14.- A movable table according to any of the previous claims, furthermore comprising a heating unit and/or a cooling unit for heating and/or cooling at least part of the working surface.
- 15 15.- A movable table for serving out food, comprising at least two modules, the table having an operating position for serving out food, and a transportation position for moving of the table, each of the at least two modules comprising an automated transferring device for transferring food receptacles from one end of the table to an opposite end thereof, the upper side of the transferring device in operating position forming a working surface of the table, the table furthermore being provided with means for fixing a support above the table surface.
